RLT1610-10MGS

- Infrared DFB Laser Diode
- 1610 nm, 10 mW
- Single transverse mode
- 5.6mm TO-Can with flat glass window

Description

RLT1610-10MGS is an infrared **distributed feedback (DFB)** laser diode, with **single transverse mode** emission at typically 1610 nm and low operating current. **RLT1610-10MGS** comes in a 5.6 mm TO-Can with flat glass window and **integrated PD**. Variants with non-spherical glass lens and reduced peak wavelength tolerance of ± 5 nm and ± 3 nm are available on request.

Precautions

Safety

Laser light emitted from any laser diode may be harmful to the human eye. **Avoid looking directly into the laser diode's aperture.** The use of optical lenses will increase eye hazard

ESD Caution

Always do handle laser diodes with care to **prevent electrostatic discharge.** We advise to **wearing wrist straps, and grounding all applicable work surfaces,** when handling laser diodes

Operating Considerations

Usage of current regulated drive circuits is mandatory. We advise to operate this laser diode with a current source and heat sink, and to never exceed the maximum specifications as outlined in this datasheet.
