

## RLT850-150GS

- Infrared Laser Diode
- 852 ±5 nm, 150 mW
- Single Mode
- 9 mm TO-Can

### Description

**RLT850-150GS** is an infrared laser diode, typical emitting at 852nm. It features single mode emission, and is TE polarized. **RLT850-150GS** comes in 9 mm TO-Can package with **integrated PD**.

### Absolute Maximum Ratings

Parameter	Symbol	Values	Unit
Operating Temperature	$T_{CASE}$	-20 – +50	°C
Storage Temperature	$T_{STG}$	-40 – +80	°C
Soldering Temperature *	$T_{SLD}$	250	°C

\* must be completed within 5 seconds

### Electro-Optical Characteristics

$T_{CASE} = 25^{\circ}C$

Parameter	Symbol	Min.	Typ.	Max.	Unit
Peak Wavelength *	$\lambda_P$		852 ±5		V
Optical Output Power	$P_O$		150		mW
Emitter Size	$A$		5x1		µm
Operating Voltage	$V_{OP}$			2.2	V
Threshold Current	$I_{TH}$		35	55	mA
Operating Current	$I_{OP}$		185	220	mA
Slope Efficiency	$\eta$	0.9			W/A
Beam Divergence, Parallel (FWHM)	$\theta_{  }$		8		deg.
Beam Divergence, Perpendicular (FWHM)	$\theta_{\perp}$		30		deg.
Lifetime (25°C, $I_{OP}$ , CW)		>10000			hour

\* optional ±10 and ±3 nm

### Pin Configuration

Pin	Description
1	LD Anode
2	LD Cathode, PD Cathode
3	PD Anode

bottom view

## Outline Dimensions

### 9 mm TO-can

Dimensions: mm

Window: AR coated

Package: hermetically sealed

Connector pins: plated gold over nickel

## Precautions

### Safety

**Warning: This LD is emitting invisible laser radiation!**

**Caution:** Laser light emitted from any laser diode may be harmful to the human eye. Avoid looking directly into the laser diode's aperture when the diode is in operation.

**Note:** The use of optical lenses with this laser diode will increase eye hazard.

### ESD Caution

Always do handle laser diodes with extreme care to prevent electrostatic discharge, the primary cause of unexpected diode failure. To prevent ESD related failures, it is strongly advised to always wearing wrist straps, and grounding all applicable work surfaces, when handling laser diodes.

### Operating Considerations

It is strongly advised to only operate this laser diode with a current source. The current of a laser diode is an exponential function of the voltage across it. Usage of current regulated drive circuits is mandatory. Laser diodes may be damaged by excessive drive currents or switching transients.

It is advised, to operate the laser diode at the lowest temperature possible, and to never exceed maximum specifications as outlined in the datasheet. Device degradation will accelerate with increased temperature. Proper heat sinking will greatly enhance stability and life time of the laser diode.
