

LED690-01AU

- IR Through Hole LED
- 690 nm, 6 mW
- AlGaAs chip, 350 x 350 μm
- 5 mm Epoxy Resin Package
- Beam Angle: $\pm 10^\circ$

Description

LED690-01AU is an AlGaAs based infrared LED, emitting at a peak wavelength of typically 690 nm and optical output power of 6 mW @ 20 mA. It comes in a **5 mm through hole** clear epoxy resin mold package with a beam angle of $\pm 10^\circ$. Different beam angle variants are available on request.

General Notes

Soldering

- Do avoid overheating of the LED
- Do avoid electrostatic discharge (ESD)
- Do avoid mechanical stress, shock, and vibration
- Do only use non-corrosive flux
- Do not apply current to the LED until it has cooled down to room temperature after soldering

Cleaning

- **Cleaning with isopropyl alcohol, propanol, or ethyl alcohol is recommended**
- DO NOT USE acetone, chloroform, trichloroethylene, or MKS
- DO NOT USE ultrasonic cleaners

Static Electricity

- **LEDs are sensitive to electrostatic discharge (ESD).**
- Precautions against ESD must be taken when handling or operating these LEDs
- Surge voltage or electrostatic discharge can result in complete failure of the LED.

Radiation

- During operation these LEDs do emit light, which **could be hazardous to skin and eyes**, and **may cause cancer**.
- Do avoid exposure to the emitted light. Protective glasses if needed
- It is further advised to attach a warning label on products/systems.

Operation

- **Do *only* operate LEDs with a current source.**
- Running these LEDs from a voltage source will result in complete failure of the device.
- Current of a LED is an exponential function of the voltage across it. Usage of current regulated drive circuits is mandatory.
