

SPM940-10W-105M-2P

- Fiber-Coupled Laser Diode Module
- 940 nm, 10 W
- 105 μm Multimode Fiber

Description

SPM940-10W-105M-2P is an infrared fiber-coupled laser diode module, typically emitting at 940 nm with an output power of 10 W. It comes in a 2-pin package with 105 μm multimode fiber and FC/PC connector.

Additional options like alternative fiber core size and connector are available on request.

Maximum Rating ($T_{\text{CASE}} = 25^{\circ}\text{C}$)

Parameter	Symbol	Values		Unit
		Min.	Max.	
Reverse Voltage	V_R		2.0	V
Operating Temperature	T_{OPR}	+ 10	+ 30	$^{\circ}\text{C}$
Storage Temperature	T_{STG}	- 20	+ 80	$^{\circ}\text{C}$
Soldering Temperature (max. 3s)	T_{SOL}		+ 260	$^{\circ}\text{C}$

Electro-Optical Characteristics ($T_{\text{CASE}} = 25^{\circ}\text{C}$)

Parameter	Symbol	Values			Unit
		Min.	Typ.	Max.	
Peak Wavelength	λ_P	930	940	950	nm
Output Power	P_O		10		W
Spectral Width (FWHM)	$\Delta\lambda$		4.0		nm
Temperature Coefficient			0.3		$\text{nm}/^{\circ}\text{C}$
Threshold Current	I_{th}		0.5	1.0	A
Operating Current	I_F		11.5	12.5	A
Operating Voltage	V_F		1.8	2.3	V
Fiber	Type		Multimode		
	Core *1		105		μm
	Numerical Aperture		0.22		
	Connector *2		FC/PC		
	Length	80			cm

*1 optional: 200 μm

*2 optional: ST, SMA905

Electrical Connection

Pin Configuration*	
PIN #	Function
1	LD Anode
2	LD Cathode

* subject to change

Outline Dimension

All dimensions in mm

Precautions

Safety

Caution: Laser light emitted from any laser diode may be harmful to the human eye. Avoid looking directly into the laser diode's aperture when the diode is in operation.

Note: The use of optical lenses with this laser diode will increase eye hazard

ESD Caution

Always do handle laser diodes with extreme care to **prevent electrostatic discharge**, the primary cause of unexpected diode failure. To prevent ESD related failures we strongly advise to always **wearing wrist straps**, and **grounding all applicable work surfaces**, when handling laser diodes

Operating Considerations

We strongly advise to only operate this laser diode with a current source. The current of a laser diode is an exponential function of the voltage across it. **Usage of current regulated drive circuits is mandatory.**

Laser diodes may be damaged by excessive drive currents or switching transients

It is advised, to operate the laser diode at the lowest temperature possible, and to never exceed maximum specifications as outlined in the datasheet. Device degradation will accelerate with increased temperature. **Proper heat sinking will greatly enhance stability and life-time of the laser diode.**
